

Welcome BikeLab,

In this tutorial we will try to provide answers to most common questions we are asked.

BikeLab produces video races compatible with Fortius, Realtour, Realaxiom and Realpower. All these cyclo trainers were tested by us for a long time.

To achieve accuracy, the equipment used to produce the video races is very expensive and sophisticated.

The use of barometric altimeters and the data comparison given from multiple GPS receivers, allows us to obtain highly accurate elevation profiles. We have written a challenging software to synchronize data with video telemetry path. It also always requires a manual laborious step by step correction to get a race that follows the contours of the road.

BikeLab consider this activity a hobby. The contribution required for the distribution of these products serves to cover part of expenses which, in some cases, also provide travels.

Compared with the first races we have significantly increased the quality of movies. Today we produce movies in Full HD but we have to reduce resolution for obvious barriers in the distribution.

Consult the document [Elenco](#), you'll have a summary of available courses.

In the sections [recent posts](#) and [archives](#), to the left of the screen, you'll find the links to the detailed information of each race. Clicking on one of those races appear to center screen descriptions, photos, profiles, plans and videos of the race.

If you wish to contribute to our work, requiring a video course, write an e-mail to bikelabmail@gmail.com .

The contribution for each race can be paid through PayPal using the Donate button located at the screen center of the site. Other method accepted is a bank transfer.

The races will be returned by regular mail, burn to DVD. Shipping costs for all EUR countries are included in the amount claimed for the race course.

To avoid compatibility problems we don't use DVD Double Layer. It also avoids the application of labels on the DVD because there were errors reported in the subsequent copy.

When a order has been shipped you will receive a confirmation e-mail and attached the data profile of the race and a document with installation instructions.

[Download video course](#) and [Videocorse Gare Professionisti](#) sections, on the right of the screen contain links to freely downloadable movies from the Web.

After downloading the movie, write an e-mail to bikelabmail@gmail.com to receive

the data profile of the race. The data profile files (also called videorace database), transform the downloaded video in a real videorace for your trainer.

Remember to always report in this e-mail your name, address and type of cyclo trainer used.

A PayPal Donation, the amount is of your choice, is required to receive data profile of the downloaded video.

NOTE: For some Videocorse Gare Professionisti a minimal amount is required.

NOTE: The quality of these videos, though acceptable, is not comparable to the original BikeLab movies.

On the right of the screen, Demo videocorse you'll find links to free download some of our demo video. By sending an email to bikelabmail@gmail.com in which you specify your name, address and type of ciclotrainer, you can get for FREE! the database file that allow you to ride the downloaded video course with your cyclo trainer.

BikeLab thanks you for visiting.
